a contactor being connected to the secondary winding so as to close or open the circuit to the secondary winding. The present invention also relates to a circuit for adjusting the drive current for the contactor. Electric current sensing transformers of the type described in the introduction are e.g. used to detect electric currents and to feed them back to the current source. It is desirable to do this with the smallest possible leakage currents. A sensor transformer having a primary winding and a secondary winding is known, wherein the secondary winding is connected to a bridge circuit having two current-sensitive input terminals. When the current flowing through the primary winding exceeds a predetermined value, the bridge circuit is coupled to a contactor which is connected to a common line. The current flowing through the primary winding is thereby fed back to the current source. In this type of sensor transformer, no consideration is given to the leakage currents which flow to ground. The sensor transformer therefore functions as a current divider with a division ratio of one. There are certainly a few ways to train your pet. Most of us don't own a dog or cat, but we can still learn from others and their pets. You can start by learning about the breeds of dogs and how each one may behave. We will go over more about this below, but here's a good start. You can find online classes for dogs, for example [here](#) or [here](#). Many of the classes are free, so check out what's available. You can also pay for classes to learn more. These are quite helpful, but you
