0b705c46801 acdsansbox.1. Field of the
Invention The present invention relates to a
radio frequency (RF) circuit and, more
specifically, to an RF circuit which uses a
switching element and a filter element with an
inductor and a capacitor disposed between a
drain of the switching element and a ground
potential. 2. Description of the Background Art

A conventional RF circuit is constructed by a first switching element, a second switching element, a third switching element, an inductor, and a capacitor as shown in Japanese Laid-Open Patent Publication No. 8-165274, for example. In this conventional RF circuit, a first drain-source path of the first switching element is connected to a second drain-source path of the second switching element, a second drain-source path of the second switching element is connected to a third drain-source path of the third switching element, and the inductor and the capacitor are connected between the first drain-source path of the first switching element and the second drain-source path of the second switching element. With this arrangement, when the first switching element and the second

switching element are switched on simultaneously, an inductive voltage $V_{sub.L}$ charged in the inductor is connected to the third drain-source path of the third switching element, so that the third switching element is switched on immediately after the first switching element. Thereafter, when the first switching element is switched off while the second switching element is continuously switched on, the inductive voltage $V_{sub.L}$ is connected to the ground potential, so that the second switching element is continuously switched on. Thereafter, when the second switching element is switched off while the third switching element is continuously switched on, an anti-series resonance occurs in the first drain-source path of the first switching element

and the third drain-source path of the third switching element, and the third switching element

What I should do to remove the "© 2012" text?

I've already tried to change the "language and regional" but this is not working for me. Thanks

A: You are facing a few problems: this comes from that the file got created on a system that was set to something different

(de_DE.ISO8859-1). as the file hasn't got a UTF-8 or UTF-16 character set encoding (but ISO-8859-1) - it will be a problem that your EDITOR does not support this character set. To get your PC running the UTF-8 character set,

just install the system wide "Accessibility" item or Microsoft's "Relicensing" which has the name "Accessibility Toolkit" (it is important to note that the names of these utilities are misleading, the functions they are doing are quite different) About the license issue, you'll need to use "license.ini" under the root folder of your folder named "Windows" (or "Program Files", but probably your "Program Files" is located in another folder, so adapt the path) to add the required license. Here is an example of the license.ini of my Windows Live account:

[License]

SoftNumberEncoding=Windows-1255

HardNumberEncoding=Windows-1255

FileEncoding=Windows-1255

ApplicationName=Microsoft.NET Framework

3.5 Service Pack 1 (x86)

RegistrationLocks=v1.0 .SoftDevice=v1.0
DataChannelEncoding=Windows-1255 You will
need to create a file LICENSE.rtf (with your
document information) and add the content of
the file "license.ini", after that you'll need to run
"Accessibility Toolkit" as administrator. //
