RELATED PROGRAMS Legacy version of eDocPrinter PDF Pro v4.2.2.1799. eDocPrinter PDF Pro is a lightweight application developed to help users create PDF files from any printable documents. Basically, it proves to be extremely easy to work with this tool, as it install on your system as a virtual printer and lets you convert documents to PDF on the breeze. Compared to other similar tools that allow users to carry out the conversion process in just a few steps, eDocPrinter PDF Pro comes packed with advanced functions that can meet the requirements of professional users. The configuration panel is straightforward, and lets you set up the dedicated parameters related to page size, orientation, resolution, borders, and number of copies. What's more, eDocPrinter PDF Pro is

able to automatically detect and add bookmarks, and it enables you to manually add and edit them. Plus, you can customize the bookmark text in terms of font, style, size, and color. Other important options worth mentioning are represented by the possibility to pick a default saving directory, specify the filename, apply overlaying options, and launch the selected utility at the end of the conversion operation. The tool allows you to send the converted documents via email, configure the compression and URL parameters, embed a new font, as well as provide details about the files, such as title, subject, author, and keywords. Encrypting the information stored within PDF items can be done by setting up passwords and selecting the encryption level, while watermarks can be embedded by inserting a text message, changing its rotation angle and opacity, and selecting the color, font, and size.

EDocPrinter PDF Pro Crack+ Registration Code

Simplify your work with KEYMACRO KEYMACRO is an innovative desktop tool that helps you quickly generate simple formulas by typing the appropriate characters. The name comes from “keywords” and suggests that this program can be used to create easy formulas based on keys (word phrases) that you enter using keyboard shortcuts. In other words, with KEYMACRO you can compose easy macros (batch files) with keywords and save them in plain text files to be used later. It should be noted that the operation of this program is carried out via a standard keyboard and is pretty fast. Once you have installed it on your computer you will be able to create formulas using a variety of characters, such as numbers, letters, punctuation marks, date and time, and file or folder names. In order to execute the operation, just insert the required word (keyword) and hit the “Execute” key. Once this step is done, you can also choose to type the formula manually by clicking on the “Press Enter” key, or just right-

click on a blank space on the screen and choose “Insert formula”. In the case you want to create a macro, simply select the desired keyword from the window. Once this process is done, you can save the macro as an external text file. The program lets you customize the number of lines and the content of each line. This is very useful to avoid having a long string in the file or to add a formula or text for security reasons. You can also group macros, delete them, or copy them. KEYMACRO comes with a simple setup panel that shows you the list of existing macros. You can also create new macros or replace the existing ones. The application also allows you to edit the file properties or create shortcuts for macros. The program can also be used to add passwords to your macros, encrypt them, or store them in specific folders. KEYMACRO also enables you to access the function keys of your keyboard. In this way, the user can use the “PRN”, “FF”, “SYN” and “INS” keys, for example, to perform other functions such as copying files, starting a program, or opening a file. For more information, simply go to the official website. CRMIS Description: A simple, elegant solution to your CRM data 77a5ca646e
