In this video, I will talk about Digital Signal Processors. Transcript: Hello, and welcome to VIBE. So today we are going to talk about Digital Signal Processors. So a digital processor is a piece of software, or hardware, that takes an analog signal, and changes it into a digital signal. So let's look at a basic digital system. So here is a simple system. We have an input, which I can think of as a microphone, and then we have a speaker, which I can think of as an output. Now here I can think of it as either a software system, where the analog signal is an audio signal. And here we are receiving an
