- Title Description Important! Before you install this software on your system, please be aware of the following. This is a protected application. You must have a valid License Key for your current version of the Protea Antivirus product in order to install. The current version may be found here: When you purchase your Protea antivirus you will receive the key and instructions on how to register this package. You may run and install this package on multiple computers, as long as you have a valid License Key. The current version may be found here: Please follow these steps to install the software on your system. Step 1 - Download the software from the link on the left side of this page. Step 2 - Extract the file using WinRAR to a folder on your computer. Step 3 - Double-click on the file that was just extracted from the rar file. Step 4 - Accept the license terms and start the installation. Step 5 - After the installation completes you will have a folder called "protea" on your desktop. In this folder you will have a folder called "admin" and a folder called "config" inside it. Step 6 - Now lets change the folder permissions so that you can move files back and forth between your desktop and the "admin" folder that was created in Step 5. Step 7 - Open Windows Explorer by going to Start > Accessories > Windows Explorer Right-click on the "C:\Users" directory, and click on Properties Click on the Security tab Select "Advanced" Select "Edit" Click on the "Owner" button, and type in "Protea", and click OK Now click on the "Group"

Presentation Pointer Crack +

Presentation Pointer is designed to give an handy tool to let you see clearly where a presentator is pointing, or better, let the people see where you are pointing. Presentation Pointer is very easy to use. Just define any region on a presentation, click on it and the pointer is on the shape. To make a pointer invisible, click on it and select "Use None". After you've defined the pointer, press the space bar to create a new pointer. To move the pointer you can use left or right arrow keys, and you can define how long the pointer appears with the shift and control keys. It is also possible to have a continuous pointer with Shift and Control keys. The pointer will appear in any shape defined with the region. This means that you can define multiple pointers and they will always be relative to each other, since they are associated with a region defined in the presentation. Presentation Pointer works with PowerPoint, Keynote, and Prezi. You can use it with all the Mac-friendly versions of PowerPoint. What's New in This Version:

- Version 1.0 with improved user interface, and support for PowerPoint and Keynote.
- Version 1.0 with minor improvements in the user interface.
- Version 1.1 with the following improvements:
  - \* The following new features have been added:
    - New option to display pointer during animation
    - New option to show/hide the status bar
    - New option to let the pointer follow the presenter's gestures during a presentation
    - New option to control the transparency of the pointer
    - New option to allow presentation of the pointer over a transparent background
    - New option to show/hide the status bar
    - New option to turn off the alert windows
    - New option to show/hide the home screen
    - New option to close the application
  - Minor improvements have been made to the user interface.
  - A bug that prevented the user from creating an animation from a presentation in Prezi has been fixed.
  - Support for PowerPoint and Keynote has been added.
  - Various minor bug fixes and improvements.

What's New in Version 1.0

---

Version 1.0 now supports PowerPoint, Keynote and Prezi. What's New in Version 1.1 This is an important update. This version now supports animations with several major improvements in speed and usability. The following improvements have been made: \* New option to display pointer during animation \* New option to 77a5ca646e

Presentation Pointer is a handy tool that will give you the flexibility to create powerful presentations with ease. How does it work? This software displays the current cursor position on the presentation area as a pointer, which can be moved as long as you move the mouse cursor and enable the "Current Pointer" checkbox. Any future presentation can be saved and loaded with no problems. Before creating a presentation, please make sure you know the presentation area (top left corner of a PowerPoint 2003) and the coordinates of the pointer cursor's coordinates. After that, you can use the "Move Pointer" button to move the pointer. You can also "Shrink Pointer" to make it a smaller size. You can customize the presentation pointer's size, background color, and style by clicking "Appearance" button. The software also can be used as a standalone presentation viewer. Why should I use it? 1. Easy to create a presentation with You don't need to remember the exact location of your cursor, let the software remember it for you. 2. Easily change presentations to different format You can quickly switch the pointer's location to change the presentation to different format, such as HTML, JPG, GIF, PDF, etc. 3. Save presentations without modifying You can save the presentation while keeping the exact pointer's location unchanged. 4. Load presentations from different format You can load presentations from different format easily with no problems. Key Features: 1. Presentation Pointer 2. Auto-remember the current cursor's location 3. Switches between presentation formats without changing the current cursor location 4. Save presentations without modifying 5. Display and change the pointer's size 6. Fully supports multiple pointers 7. Save the current pointer's location 8. Restore the current pointer's location 9. Create presentations with various styles 10. Load and save presentations with different file format 11. Ability to show a different color for a pointer 12. Drag and drop presentations from different format 13. Drag and drop presentations from other applications such as MS Word 35. Presentation Pointer4 10. Support for more languages. 11. Ability to choose different size of a pointer. 12. 3-D representation of pointer. 13. Ability to change pointer's shape. 14. Make the pointer bigger or smaller
