2007 enhancements In 2007 Autodesk introduced a number of changes to the user interface and underlying architecture. This included: AutoCAD Serial Key 2009 introduced a simple user interface designed to help users avoid creating views of the same drawing. It is supported in Windows XP, Vista and Windows 7. The axis orientation order is now set in relation to the mouse pointer (as opposed to the drawing axis order). The drawing outline remains when the shape is edited with the Scissors tool. This enables the Scissors tool to work in a similar way to the Rotate, Move, and Scale tools. The AutoCAD Class Viewer was moved from the menu bar to the ribbon, and is now used when opening a drawing. The Report panel was renamed from Plotting to Reporting. The panel can be used to view and modify reports about the elements in a drawing. The drawing status is now indicated by a small icon in the status bar. It is changed from the standard white box when something changes. AutoCAD R2014 introduced the ability to use CAD layering and groupings with the selection and fitting tools. The tools can be used to group elements and fit one group to another. A separate viewport was introduced for the Drawing Unit, which is used for scaling the drawing. In AutoCAD R2014, these features are not available for drawings created prior to the release of AutoCAD R2014.
